- Bill validation – counterfeit protection in a closed-safe environment
- Secure environment – robbery, burglary and shrinkage deterrent
- Remote visibility of kiosk network – integrated view of cash flow
- Armor Car Ready - enabling closed-loop cash flow

CSS Kiosk Solutions Enhance Your Customers Experience – and Secure Your Cash

Credit and debit payment for retail products and services is growing, but a customer's preferred method of payment in 6 of 10 transactions is cash. Our solution enables customer payment preferences, whether credit card, debit card, prepaid card or cash. With CSS kiosk solutions, you can

accept and validate cash payment directly into a secure business-rated safe. You also have immediate visibility of cash flow across your entire kiosk network.

RETAIL KIOSKS

Everyone is busy, everyone is moving fast in today's world – including customers. Waiting in line – waiting anywhere – is keeping them from moving on in their day. They are looking for a convenient, easy transaction so they can be on their way.

Retailers are constantly evolving their environment to meet the needs of their customers. Kiosks are one means of meeting customers' needs and enabling

today's fast-paced lifestyle. But retailers have needs of their own. They must listen to not only the voice of the customers, but also the voice of the business. The business is constantly looking for ways to increase revenue and decrease costs – and kiosks can help accomplish both of these objectives. They impact revenue by providing convenience of purchase for customers, while increasing staff productivity by reducing time spent completing cash transactions.

Unfortunately many of today's kiosks do not have a secure environment for cash, are implemented as standalone "islands" of transactions, or cannot accept cash at all.

WHAT MAKES A BETTER KIOSK

In order to facilitate convenience and improve the customer's kiosk purchase experience, all methods of customer payment need to be accepted – including cash. When cash is processed through a kiosk, it should be received into a secure and safe environment with restricted access. This means you need to be able to keep the door of the kiosk closed as much as possible. When you open a kiosk to access the cash, either to transfer the money to a safe or to count the contents, you are increasing risk of theft and shrinkage. Even changing the receipt paper represents exposure. To avoid these risks, you need a kiosk that provides a secure enclosure for the cash it contains, but still enables visibility of its contents.

CSS KIOSKS DELIVER

CSS kiosks are built on a secure, integrated platform to meet the needs of today's retail establishments. They are

built around a business-rated safe that provides a secure repository for cash. CSS employs the best bill acceptors in the industry, which can consistently and accurately read all denominations and provide automatic counts of money received, while protecting against counterfeit currency. These features not only reduce the threat of theft, shrinkage and counterfeit currency, but also provide customers the capability to pay with cash. In addition, depending on your business, you may be able to reduce merchant credit and debit card processing fees.

CSS kiosks can be networked and integrated into existing business systems to provide remote cash monitoring and access management, enabling a closed-kiosk environment. Cash received into the kiosk can safely reside in the kiosk until removed to make a bank deposit – removed by either an armored car service provider or an authorized staff member. Access can be granted and monitored remotely to aid in enforcing business rules and identifying procedure violations.

The ability of CSS kiosks to accept cash in a secure, closed-kiosk environment also enables productivity gains. Retail staff productivity increases, since they spend less time conducting cash transactions, transferring cash from the kiosk to the safe, counting cash in preparation for a bank deposit and reconciling discrepancies when counts do not match receipts.

Importantly, CSS kiosks are backed with outstanding delivery, installation, training and service programs, providing you a total solution for your kiosk needs.

TAKE YOUR KIOSK TO THE NEXT LEVEL

CSS kiosks enable you to take your kiosk selling programs to the next level by providing:

- **Bill validation – counterfeit protection in a closed-safe environment**

- **Secure environment – robbery, burglary and shrinkage deterrent**
- **Remote visibility of kiosk network – integrated view of cash flow**
- **Armor car ready – enabling closed-loop cash flow**

These capabilities enhance your customers' experience by accepting cash while conducting kiosk transactions and enable you to implement and manage a secure network of retail kiosks.
